FROGGER OWNER'S MANUAL

Copyright - 1981 by SEGA/Gremlin, All Rights Reserved

INTRODUCTION

FROGGER is an electronic game that makes extensive use of digital integrated circuitry and television monitor concepts. This manual is designed for the maintenance technician who possesses a general knowledge of solid state circuitry, microprocessor and digital integrated circuitry, and TV monitor concepts. Any individual not knowledgeable in these areas should not attempt repair of the electronic portion of the game.

IMPORTANT NOTES

The following note is included in compliance with FCC rules:

WARNING: This equipment generates, uses, and can radiate radio frequency energy and if not installed and used in accordance with the instructions manual, may cause interference to radio communications. As temporarily permitted by regulation, it has not been tested for compliance with the limits for Class A computing devices pursuant to Subpart J of Part 15 FCC Rules, which are designed to provide reasonable protection against interference in which case the user at his own expense will be required to take whatever measures may be required to correct the interference.

TRANSFORMER VOLTAGE CONVERSION INSTRUCTIONS

Before plugging in your game, make sure that the game voltage is correct for your location. Locate the two leads from the AC junction box to the power transformer. For 110 VAC, they should be connected to terminals 1 and 3 on the power transformer. For 100 VAC, connect 1 and 2, and for 220 VAC applications, they should be connected to 1 and 4. You will also notice on the AC junction box that there is a safety interlock switch. When the rear panel is in place the switch is depressed and the game receives power. Removing the rear panel, the switch returns to its original position and the power is cut off from the game. For servicing, this switch can be pulled out and power will be restored.

OTHER NOTES

NEVER replace any components with anything other than exact replacement parts.

NEVER remove circuit board connections while power is on.

DO NOT replace the fuse with anything other than the proper value. A blown fuse indicates an overload condition within the game. Replacing the fuse with a higher value can cause severe damage to internal components if an overload occurs.

ALWAYS consult the manual before attempting repairs.

CORRESPONDENCE regarding this game should be addressed to:

SEGA/Gremlin

FROGGER GAME CONCEPT

Frogger is a one or two player game in which players move their frog from the bottom to the top of the screen. This is achieved by overcoming a number of hazards without getting run over or drowned.

The first half of the screen is a bi-directional flow of traffic including buses, cars and race cars. Players must avoid these vehicles. Frogs can move safely with the flow of traffic to make their way to the second half of the screen which consists of a river with fast moving logs and sinkable turtles. Frogs must hop on the backs of the logs and the sinkable turtles to get to the home base at the top of the screen. At random times throughout the game play a lady frog will appear on a log. Bonus points are scored if your frog successfully hops on the back of the lady frog and escorts her safely home. A fly will also appear randomly in a home base. Bonus points can be scored if your frog hops in the home base when the fly is present. Sinking turtles also swiftly move across the river with the logs. If a frog is unsuccessful in hopping on a turtle's back, the frog will sink and drown. Crocodiles, snakes and otters also roam the moving river waiting to eat frogs on their way up to the home base. Players can hop on their back (except the snake, whose touch is deadly), but they must avoid their open mouths. The frog must be lined up perfectly to enter one of the five home bases. You must maneuver the frogs to their home base within the allotted time (sixty beats on the timer).

Game Action

The frog can move vertically or horizontally by maneuvering the joystick. You must maneuver your frog swiftly and precisely without getting run over, drowned or eaten by the creatures that roam the flowing river. Avoiding traffic. deadly snakes, otters, crocodiles and the treacherous diving turtles make game action stimulating in Frogger.

Scoring

10 points are scored for each safe jump. Arriving safely home scores 50 points and for beating the timer (10 points per beat saved). Bonus points are obtained by escorting home a lady frog (200). Gobbling an insect (200) and safely getting all five (adjustable) frogs home (1000). If you get all five (adjustable) frogs home, then you go on to a swifter more difficult round. Game ends when all frogs are drowned or devoured.

FROGGER GAME OPTIONS

<u>GAME OPTIONS</u>	<u>1</u>	<u>2</u>	<u>3</u>	<u>4</u>	<u>5</u>	<u>6</u>

TROUBLE SHOOTING

1. 834-0068 SYNC. RELATION FAULTY

BLOCK DIAGRAM FOR OSCILLATION · HORIZONTAL · VERTICAL SYNC.

a. PICTURE DRIFTS AWAY

IT COULD POSSIBLY BE THE FAULT FROM THE SYNCHRONIZING CIRCUIT.
FOLLOW THE FLOW CHART BELOW FOR INSPECTION.

b. PICTURE WILL NOT APPEAR

2. RESET FAULTY

a. WHEN GAME STARTS, PICTURE DISAPPEARS.

- 1 IS THE CHIP SELECT OF ROM FUNCTIONING PROPERLY?
IS THE ADDRESS DATA BUS FUNCTIONING PROPERLY?
- 2 ARE THE OUTPUT POWER PIN 12, 13, 14, 15 OF IC 15 FUNCTIONING PROPERLY?
ARE THE INPUT POWER PIN 1, 2, 3, 4, 5, 6 OF IC 15 FUNCTIONING PROPERLY?
CHECK ESPECIALLY ON 6TH PIN OF IC 30 TO THE 4TH, 5TH PIN AS WELL.
ARE PINS 10, 13, 14, 15 OF IC 28 NORMAL.
- 3 BUFFER FOR ADDRESS BUS OF IC 3, 4, 14 FAULTY?
ESPECIALLY, TOO MUCH FAULTY OF TEMPERATURE.

b. WHEN INSERTING COIN, IT RESETS.

- 1 IS THE CHIP SELECT (8 PIN) OF IC 19, 20, 21, 22 FUNCTIONING PROPERLY?
IS THE ADDRESS DATA BUS FUNCTIONING PROPERLY?
- 2 ARE THE INPUT POWER SIDE OF 1, 2, 3, 4, 5, 6 PIN OF IC 17 NORMAL?
FOR 6 PIN, CHECK ALSO 4, 5 PIN OF IC 30.
- 3 BUFFER FOR ADDRESS BUS OF IC 3, 4, 14 FAULTY.

3. COLOR FAULTY

1. COLOR HORIZONTAL LINE APPEARS.

1 MANY TEMPERATURE FAULTY IN TTL-ROM OF IC 56, 57, 58, 59, 60.

2 FAULTY OF EITHER CHARACTER ROM OR WEAK CONTACT OF SOCKET.

2. WHEN THE COLOR IS LIGHT OR NO COLOR.
 FAULTY OF IC 61 FUSE ROM 6331-1.

3. THE WHOLE ENTIRE COLOR IS DIFFERENT.

1 IN THIS CIRCUIT DIAGRAM, THE COLOR HAS ALREADY BEEN DECIDED FOR THE CHARACTERS.
 FOLLOW THE SIGNAL LINES CAREFULLY.
 THESE ARE THE SIGNAL LINES FROM THE RESULT OF GATES DESTROYED.

2 PULLING OUT OF BACK COLOR CAN BE DONE THROUGH IC 92, 82.

4. VIDEO FAULTY

1. PICTURE MOSAIC

1 2 IS CHIP SELECT WORKING PROPERLY?
IS THE ADDRESS DATA BUS NORMAL?

3 ARE THE INPUT/OUTPUT POWER OF DECODE NORMAL?
FOR 6 PIN, CHECK ON 4, 5 PIN OF IC 30.

2. THE SCREEN IS SHOWN HORIZONTALLY DOUBLED & TRIPLED.

- V RAM OF MUX – SURROUNDING (CIRCUMFERENCE)
IC 76, 87, 97, 98, 99
- CHARACTER ROM – SURROUNDING (CIRCUMFERENCE)

3. THE SCREEN IS SHOWN VERTICALLY DOUBLED, TRIPLED ETC.

- INVERSION FAULTY IC 70, 80

4. WORDS APPEAR ON SCREEN.

- OFF-TIMING OF V RAM. IC 74, 75.

5. INVERSION FAULTY OF WORDS FOR 2 PLAYERS.

- IC 42, 43, 61, 70, 81.

6. OFF-POSITIONING OF CHARACTER OR WHEN CHARACTER (SUCH AS FROGS) DO NOT APPEAR.

- ADDRESS BUS WORKING FROM OBJ-RAM TO TTL ROM FAULTY.
IC 37, 47, 48, 49.

7. CHARACTER TURNS INTO NUMBER.

- ADDRESS COUNTER OF TTL RAM FAULTY.
IC 37, 49.
- OFF-TIMING (V) FAULTY OF V RAM.
IC 76, 77.

8. TURNS INTO MOSAIC AT TIMES WHEN SHIFTING THE CHARACTERS.

- FAULTY OF DATA SELECTOR INSERTED IN CHARACTER ROM.
IC 88, 89, 90.

834-0069 - TROUBLESHOOTING

1. CHECK ON PPI

- CHECK ON CHIP SELECTOR (6 PIN)
- CHECK ON $\overline{RD}$ (5 PIN), $\overline{WR}$ (36 PIN)

2. CHECK ON CPU SURROUNDING

- CHECK CLK ABOUT (APPROXIMATELY) 1.8MHz
- CHECK ON CIRCUIT OSCILLATION
- CHECK ON $\overline{RESET}$ L $\rightarrow$ H
IC 39, 8, 9 PIN
- CHECK ON $\overline{INT}$
IC 11 1 PIN H
3 PIN L
6 PIN H
CHECK IC 5, 36

3. CHECK ON ROM, RAM

- CHECK ON CHIP SELECT ROM (20 PIN) RAM (8 PIN)
- CHECK ON ACTION
- CHECK THE ADDRESS DATA BUS.
- CHECK THE I/O POWER OF IC 3, 10, 27, 28, 29

4. CHECK ON P.S.G. (8910)

- CHECK CLK (22 PIN) ABOUT (APPROXIMATELY) 1.8MHz
- CHECK THE INPUT POWER OF 6, 7, 9, 10 PIN ON PORT B
- CHECK BC1 (29 PIN) BC2 (28 PIN) BD1R SIGNAL
BC1 $\rightarrow$ L BC2 $\rightarrow$ SIGNAL BD1R $\rightarrow$ SIGNAL
- CHECK ANALOG (ANALOGUE) OUTPUT POWER CHA (3 PIN)
CHB (4 PIN) CHC (38 PIN)
CHA $\rightarrow$ SIGNAL CHB $\rightarrow$ SIGNAL

5. CHECK THE FILTER

- HOW ABOUT THE JOINING CONDITION TO CAPACITOR RESISTANCE?
- IS FILTER CONTROL OK?
IC 18, 19, 20

6. CHECK THE ACTION TO LM741

7. CHECK M51516L

- HOW ABOUT THE JOINING CONDITION TO CAPACITOR RESISTANCE?
- CHECK THE ACTION OF 3 PIN (USUALLY HIGH)
IS OUTPUT POWER OK? 8, 9 PIN
